

OCD

Inattentive OCD by Lone Sorensen

Online Home Training course

For children with
Attention Deficit Disorder without Hyperactivity

What is OCD?

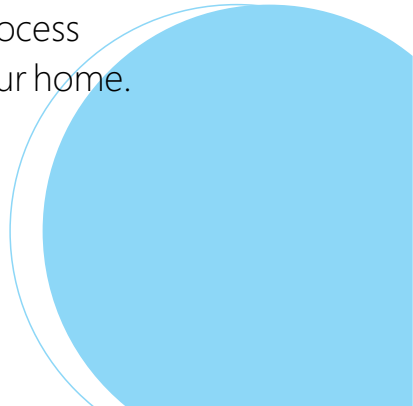

Obsessive-compulsive disorder is a disorder in which children have recurring, unwanted thoughts, ideas, or sensations - also referred to as obsessions - that make them feel driven to do something repetitively - or compulsively. These repetitive behaviors - which include, amongst other, hand washing, checking on things, or cleaning - can significantly interfere with a child's - and a child's family - daily activities and social interactions.

How can this course help?

Temprana Neuro Reflex Therapy is a holistic system of stimulation that incorporates physical, sensory, speech cognitive, and nutritional functions designed to maximize results with children with different symptoms and disorders.

This comprehensive online training, delivered by specialist in Neuro Reflex therapy Lone Sorensen, will equip you with the practical skills and knowledge to understand how to support your child with OCD dysfunctions with gentle manual stimulation of nerve areas on the face, hands, and feet.

This course will develop your understanding of the manual stimulation process so that you can practice this method on your child from the comfort of your home.

Learn how to help **your child at home!**

Course Details

The course will be delivered on our digital platform and participants will have access to the video content and downloadable resources from the comfort of their homes right after payment. They will be able to complete the course at their own time and speed.

The course includes 9 training videos and downloadable digital handouts. This material amounts to approximately 10 hours of online content. Parents must calculate 7-8 hours of practice besides the time used to follow the training videos and digital handouts.

Included in this course are free email consultations with Lone Sorensen.

The course is divided into 2 parts:

Part 1

- Manual stimulation guidance.
- Practice and theory of Facial Reflex stimulation.
- Practice and theory of Neuro-Hand Reflex stimulation.
- Practice and theory of Neuro-Foot Reflex stimulation.

Format

MEDIA: Videos and PDFs

DURATION: 8 hours

START: Anytime

Part 2

- Diet and dietary supplements.
- Nutritional information.
- Dietary supplements for your child.
- Recommendations on how you can help your child eat the right food.

Format

MEDIA: Videos and PDFs

DURATION: 2 hours

START: Anytime

Course price: 670USD

Course Benefits

Targeted Program

Catered to your child's need

Easy to learn

Supporting material built with you in mind

Easy to apply method

You only need your hands and a natural moisturizer

Visible improvements

If applied correctly, you will see fast improvements in your child

Free email consultations

with Lone Sorensen

We want to make sure that you understand the course content and will guide you through the journey of helping your child to a better life.

Therefore, this course includes free email consultations where Lone Sorensen will answer any questions that come up during the course.

BOOK also personal online meeting with Lone Sorensen.

What is Temprana Neuro Reflex Therapy?

Temprana Neuro-Reflex Therapy method consists of retraining the brain using a specific home training program that combines different neurological stimulation methods of face-, foot- and hand-reflex-therapy.

Neuro-Reflex Therapy is a 100% natural manual method and can be combined with other home training methods.

How does Temprana Neuro Reflex Therapy work?

By stimulating neurological points on the face, skull, feet, and hands, electrical impulses are sent through the Central Nervous System to the brain, where neurotransmitters will be charged and then send the impulses back to the body's organs and glands to help regulate all body processes and the body's self-healing process.

Besides the brain functions, it is also possible to stimulate hormone and body functions with Neuro Reflex Therapy, thereby also helping to alleviate breathing problems, allergies, and digestive problems.

The Neuro Reflex Therapy method also helps with sensory dysfunctions such as poor vision and hearing.

By stimulating the endocrine and lymphatic system, Temprana Neuro Reflex Therapy method increases the excretion of waste substances, which ensures better conditions for the immune system.

The Central Nervous System is dynamic, i.e. it changes depending on conditions. It is flexible and always in the process of forming new neural networks. The brain also possesses certain plasticity, which means it can form new neural connections a process that is positively affected by intense NeuroReflex Therapy stimulation.

The Central Nervous System has an amazing capacity for regeneration and adaptation, this capacity can be further improved by applying Neuro Reflex Therapy.
